PROFILE

AI automation consultant and software builder creating custom CRMs, conversational assistants, and connected workflows. Client automation experience since 2023, combining n8n and Make with custom applications and AI-assisted development. Brings firsthand business-operations experience to discovery, workflow design, and implementation.

CORE STRENGTHS

- Discovery and solution design: process mapping, requirements, scoping, and business-owner communication.
- Automation and integration: onboarding, lead follow-up, CRMs, APIs, webhooks, and structured data.
- AI applications: conversational flows, LLM integrations, document workflows, research, and MCP-connected tools.
- Software delivery: database-backed applications, debugging, Git, documentation, and iterative improvement.

EXPERIENCE

Automation Consultant | Freelance

October 2024 to present

- Built onboarding and lead follow-up automations using n8n and Make, connecting CRMs, spreadsheets, and APIs.
- Developed social-posting and SMS/email notification workflows with Google Apps Script and connected business tools.

Assistant Preconstruction Manager | Independent Contractor, US Client

May 2026 to present

- Built Athena, a custom CRM, around project intake, follow-ups, and operational records.
- Applied AI-assisted tools to document review, change-order preparation, notifications, and information retrieval.
- Combined operational responsibility with internal software development and workflow improvement.

AI Technology Consultant | Digital Tycoons Worldwide

December 2024 to August 2025

- Built a custom Messenger-connected sales assistant on an existing proprietary chatbot platform.
- Designed inquiry handling and closing-oriented follow-up; adapted the workflow across multiple members and client pages.

AI Chatbot & Automation Specialist | Freelance Projects

January 2023 to November 2024

- Delivered chatbot and automation work for 15+ e-commerce clients using Botcake, Botpress, and GoHighLevel, with CRM/Google Sheets integrations and drip campaigns.

Some consulting engagements overlap with engineering roles.

SELECTED SOFTWARE & AUTOMATION PROJECTS

Athena | Custom CRM and operations

Client work with ongoing development | React, Node.js/Express, SQLite, n8n, Microsoft Graph, MCP

- Centralizes opportunities, follow-ups, job context, and change-order-related records. Architecture includes Microsoft 365 integrations, scoped tool access, events, and database backups; newer integrations continue to evolve.

n8n bid intake | Email-to-record integration

Integration project with ongoing reliability work | n8n, Microsoft Graph, PostgreSQL, SharePoint/Excel

- Connects invitation emails, extraction, duplicate checking, and workbook updates, with source-message context carried into structured records.

ARGUS | AI-assisted opportunity research

Ongoing project | Python, FastAPI, SQLite, React, LLM integrations

- Gathers public-source research and ranks likely bidding contractors, with source context and confidence labels to support human review.

Pantheon & OpenTakeoff | Document and takeoff tools

In development | Next.js/TypeScript, Convex, PDF tools, Gemini; related Rust workspace

- Developing document-analysis assistance in Pantheon and a distinct Rust takeoff/import project. Reference comparisons support testing of measurement and import behavior.

Kairos & DocuSlice | Productivity and document utilities

Projects in development | Electron, React, TypeScript, local data, AI integrations, PDF tools

- Kairos explores AI-assisted task capture, meeting transcription/summaries, and synchronization. DocuSlice splits large documents into manageable pieces for review and processing.

eQuote & Terminus | Focused operational tools

Partial implementation / ongoing tool | Node.js, TypeScript, PostgreSQL, XML; HTML/CSS/JavaScript

- eQuote explores supplier submissions and quotation XML. Terminus is an offline construction workbench with member comparisons and source traceability.

TECHNICAL TOOLKIT

Automation: n8n, Make, Zapier, Google Apps Script, VBA, GoHighLevel, Botpress, Botcake.

Development and data: JavaScript, Python, SQL, React, Node.js/Express, SQLite, Git, APIs and webhooks. Additional project work includes TypeScript, Next.js, Convex, Rust, and PostgreSQL.

AI and connected tools: Claude Code, ChatGPT, LLM integrations, MCP, Microsoft Graph, SharePoint, Outlook, Google Sheets, and Excel.

BUSINESS & ENGINEERING FOUNDATION

Licensed Civil Engineer with earlier steel-detailing and estimating experience at JFE Techno Manila, EasyTrim Reveals, and Brightline Contracting. Founded and operated Nice Cache on Shopify, including acquisition, fulfillment, and support. This background informs discovery, workflow design, and communication with business owners.

BS Civil Engineering | Technological University of the Philippines, Manila | 2012 to 2017

Featured customer speaker, ConstructConnect AI webinar | December 2025
